

Recommendations For H. Paul Shuch

“I have always been impressed by Dr. Shuch's creative innovation and his engineering depth and knowledge.” April 26, 2008

Jack Unger, *Test Technician, Microcomm Consulting*
reported to H. Paul Shuch at Microcomm Consulting

“A consummate educator, Paul excited and entertained our students as he explored realms of physics, radio astronomy, aeronautics and space history. Paul is a catalyst. If he's in the room, you'll have a lively discussion. He loves to build things. I brought my children to the field trip he organized to his back yard Very Small Array of radio telescopes listening to the amazing variety of signals from space. I miss his frequent visits to my office, as every day he had something supremely interesting to tell me. But I am still lucky to see him monthly at our regional pilots' meeting, where he gives FAA Safety presentations and makes us think twice about everything we do.” November 15, 2008

Geoff Knauth, *Computer Science Instructor, Lycoming College*
worked directly with H. Paul Shuch at Lycoming College

“Paul Shuch is a dedicated professional who addresses any technical program in an exemplary, energetic and competent manner. His attention to detail is very complete and his report writing skills are simply exceptional. I would highly recommend him for both his competence and professionalism.” November 15, 2008

Gareth Knowles, *Owner, QorTek*
managed H. Paul Shuch at Qortek, Inc.

“I know Paul Shuch through his unique "Dr. SETI" persona, as the founding Executive Director of The SETI League, Inc., and Principal Investigator for its Project Argus and other scientific efforts. He is also a respected educator and experienced technologist, responsible for the development of the world's first commercial home satellite TV receiver. I recommend Paul for any scientific or engineering project involving microwave circuitry, satellite communications, or radio astronomy.” April 26, 2008

Alexander Zaitsev, *Chief Scientist, Institute of Radio Engineering and Electronics, Russian Academy of Science*
worked with H. Paul Shuch at The SETI League, Inc.

“Paul is superbly organized and an efficient administrator of the SETI League (although like most academicians, he would probably cringe at being called an administrator). He can organize international meetings, publish papers, edit journals, serve on committees, design circuits, and build instruments all nearly simultaneously and still remain within budget. He has a strong entrepreneurial spirit and sense of adventure that motivates others who work with him.” July 6, 2007

Robert Lodder, *Professor, University of Kentucky*
was with another company when working with H. Paul Shuch at The SETI League, Inc.
